

# VARROX EDDY

The first Li-ion powered oxalic acid vaporiser.  
Prepare – Start - Walk away

Varrox Eddy is the first truly independent electric vaporiser. No cables, no generator, no heavy car battery are required. Varrox Eddy is lightweight, easy and safe to operate.

- Weighs less than 600g
- Duration of treatment and temperature are computer controlled
- Treats 18 hives (1 g) or 12 hives (2 g) with one charge

**Deadly to Varroa, limits stress to the bees and safe for the beekeeper**

## 1. Prepare

Fill the crucible with the required amount of oxalic acid and place it in the hole of the base. Insert the base in the beehive (required opening 15mm x 90 mm) and close remaining openings.

## 2. Start

Press start button to begin the treatment.

## 3. Walk away

The extra bright LED changes colour to indicate the stage of the treatment process. No action is required until the light is blue and Varrox Eddy starts cooling down.
