

# InsectoSec®

Highly effective biocide for the control of crawling insects in house and garden and parasites in the environment of pets

# InsectoSec®

Active ingredient: 1000 g/kg diatomaceous earth

**InsectoSec®** is an insecticide for biocidal applications in house, yard and garden. It has a strong dehydrating impact on all insects which come into contact with the product.

Diatomaceous earth –  
Natural deposit

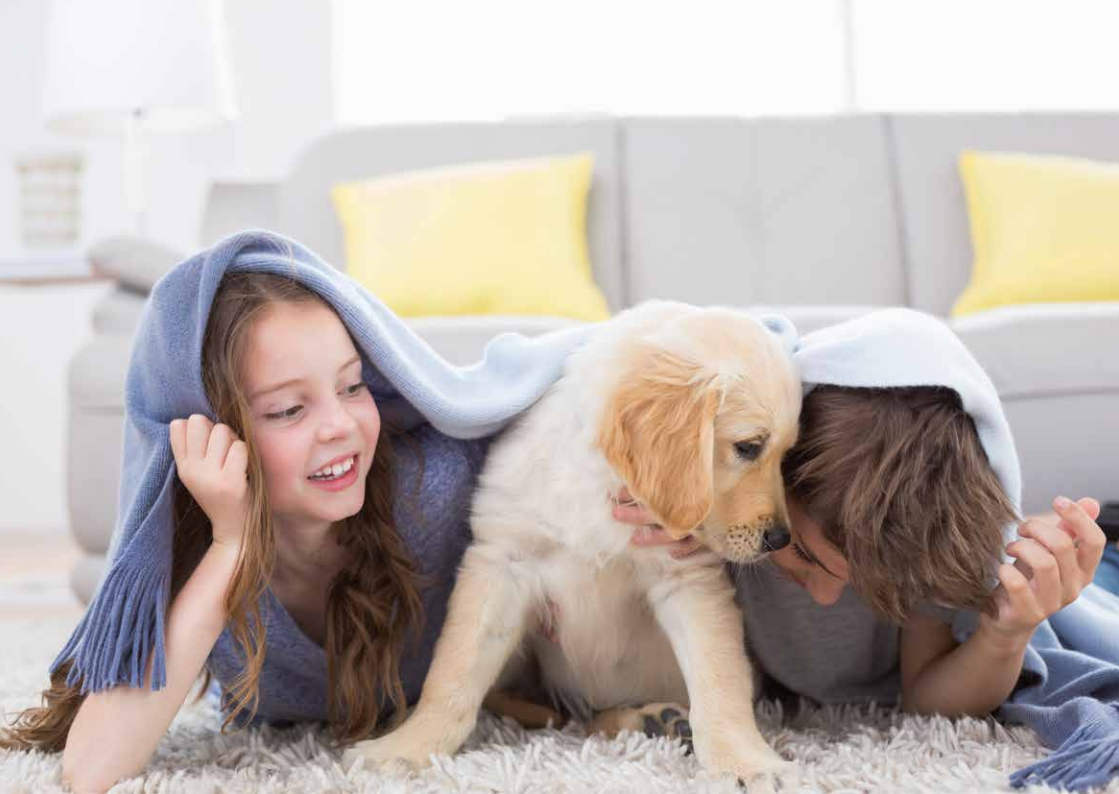

## Active ingredient

Diatomaceous earth/natural Kieselguhr is composed of the microscopic shells of fossilized diatoms. These dead microorganisms settled millions of years ago in rivers and also in the sea. Our InsectoSec® products contain pure sweetwater diatoms which are extracted by surface mining.

InsectoSec® is a very fine, almost white powder which strongly attracts water and lipids. These characteristics are essential for ecologic pest control.

## Mode of action

InsectoSec® has a strong dehydrating impact on pests. The insects can be dusted directly but is also sufficient to apply the product to their travel routes and hiding places. As soon as they come into contact with the powder it sticks to their outer layer and makes it weak by extraction of lipids. Due to this weakening of the protective layer the insects lose moisture and desiccate. InsectoSec® is odourless and easy to remove after successful application. According to current scientific knowledge, resistances are not possible.

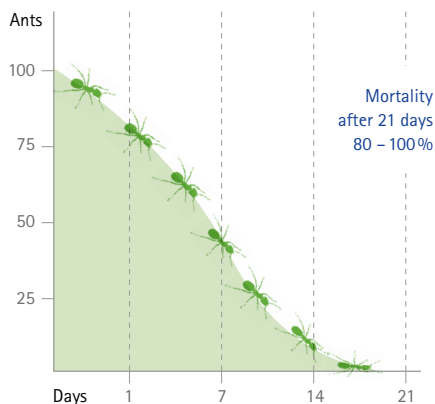

## Application

InsectoSec® can be extensively spread or installed as a dust barrier. The travel routes, e.g. behind skirtings or the pet basket, the kennel or the birdcage are dusted. Ant trails are stopped or diverted easily by a dust barrier.

After successful control the dead insects should be removed. The dust can be left at place if it does not disturb. Due to the light color it can be easily checked if there is still enough product.

Best efficacy is achieved with application on dry underground. The application can be repeated several times.

To avoid dust in the living spaces, it is recommended to use the InsectoSec® aerosol spray.

- ✓ High efficacy
- ✓ Easy application
- ✓ Effective long-term protection
- ✓ No resistances
- ✓ Odourless

Use biocides carefully.  
Always read label and  
instructions before use.

# InsectoSec® – Products

---

BauA Reg.Nr.: N-16171

## InsectoSec® Pest control powder for pets

Effective control of crawling insects in the environment of pets

For the use in living spaces, stable, kennel, pet houses, etc.

**Packing unit:** 100 g / 200 g

BauA Reg.Nr.: N-16171

## InsectoSec® Pest control powder for house and garden

Effective control of crawling insects in the house and on the terrace

For the use in living spaces, kitchen, cellar etc. and on dry paved surfaces.

**Packing unit:** 100 g / 200 g

BauA Reg.Nr.: N-57563

## InsectoSec® Aerosol spray

Effective control of crawling insects

For application without dust in living spaces, kitchen, cellar etc. and on dry paved surfaces.

**Packing unit:** 500 ml spray can

No dust during application,  
very good adhesion
